V10 VERMICULITE COVERER

Williames

Leading by Innovation

V10 WITH VERMICULITE RETURN & EXTRA WIDE BIN ST2500 SEEDING LINE

Williames V10 COVERING MACHINE adds a covering layer e.g., of vermiculite, after the tray has been filled and seeded, dispensing an even layer of covering vermiculite. It has been widened to accommodate the high throughput of the ST2500 Seeding Line that takes two trays simultaneously, presented side on (east-west orientation).

FEATURES

- Simple to operate
- Adjustable feed gate
- Or, when it is part of a Williames Seeding Line (as shown on the front page), the V10 Conveyor is chain-driven off the Seeder and timed to close the gap between trays to allow continuous running while reducing the gap between trays, tray-to-tray, to avoid spillage and wastage of the vermiculite
- Single or three phase power

- Ribbed belt feed precisely dispenses the vermiculite covering
- Low level viewing glass lets the operator assess the level of the hopper contents
- 1.0 cubic metre capacity in standard V5
- Robust construction means low maintenance and high productivity

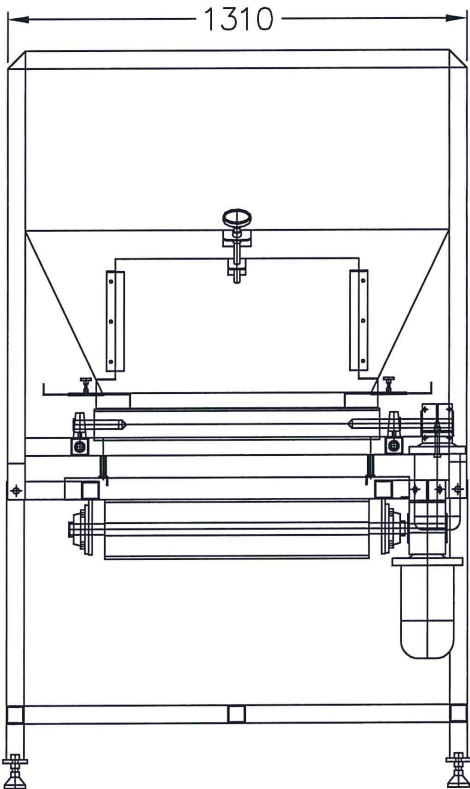

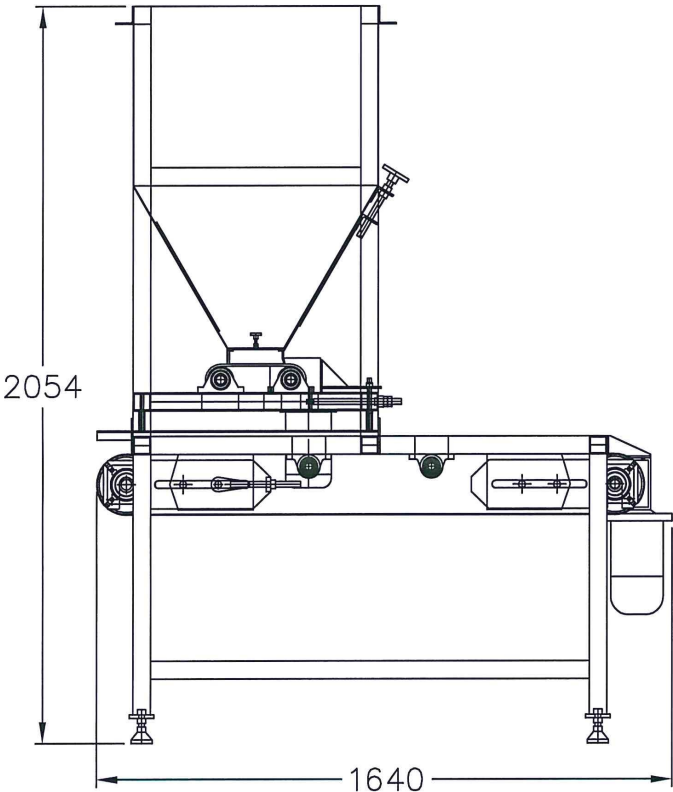

OPTIONS

- Vermiculite return
