PLANT TRIMMER

Williames

Leading by Innovation

Williames Plant Trimmer is a stand alone machine designed to trim seedlings to a uniform height before they are planted in the field.

It is a simple machine to operate and ruggedly constructed in stainless steel.

The two-strip white polyurethane conveyor (*below*) carries the trays at an even pace to pass the seedlings underneath the Plant Trimmer Cutting Head (*left*) which trims the seedlings to a uniform height before they are taken out to the field for planting.

A very useful machine for producing plants such as leeks which are best grown, boxed and presented to the market at a uniform height.
